

# VERSO

The future of high-impact training is immersive, and adaptive

VERSO is a comprehensive software ecosystem designed for managing and deploying advanced Virtual Reality (VR) training simulations for CBRN scenarios delivering the depth, realism, and analytical capability that first responders, teams, and safety professionals demand.

From predefined training to fully customisable operational scenarios.

 Scenario builder without coding

 Adaptive and dynamic environments

 Extensive asset library

 Multi-user & remote training capabilities

## Why Almost Real?

Almost Real is the spinoff of Fondazione SAFE, an institution advancing security, defence, and civil protection since 2018. What started as cutting-edge research becomes with Almost Real a concrete training ecosystem.

VERSO, developed in collaboration with Altheria, is the product of that expertise, translated into a platform that bridges the gap between simulation and reality.

Almost Real training to perform real in CBRN context.

 Almost Real

 Almost Real

**VERSO** Customise.  
Deploy.  
Evaluate.

In joint venture with 

## Three intragrated component for one seamless experience

1. **Verso Editor:** Customise complex and dynamic training scenarios from ground up.
2. **Verso Console:** Organise modules, manage users and headset, monitor live sessions, and turn raw training data into actionable performance, all from one online portal.
3. **Verso Application:** Deliver fully immersive VR experiences across industry-standard headsets, including CBRN-specific hardware.

## The Editor

VERSO Editor is engineered to give subject-matter experts full control over the training. No developers required. Scenario design and configuration are accessible to all operational profiles, with no technical or coding expertise required.

🚗 Nonlinear & Randomised Scenarios

🧑‍🚒 700+ interactive and static CBRN assets

✍️ Easy to modify

🌐 Global Deployment Ready

## The Console

The VERSO Console gives trainers and program managers full visibility over every aspect of their VR training operation in real time and after the fact. The central hub to monitor, assess and optimise learning outcomes.
